

# AQUAFORM

## The sustainable growth promoter

Growing awareness from consumers and producers of aquaculture species has resulted in calls for responsible and sustainable aquaculture worldwide. Public opinion and regulatory authorities in most export countries focus now on the misuse of antibiotics in aquaculture and public attention has shifted towards sustainable production methods.

In order to fulfil such challenging demands ADDCON has developed a sustainable, non-antibiotic growth promoting feed additive for modern aquaculture – AQUAFORM.

**AQUAFORM is the effective solution for:**

- Significantly increased growth
- Strong antimicrobial effects help to mitigate the impact of bacterial infections

AQUAFORM fulfils tomorrow's requirements today.

AQUAFORM is safe and sustainable and has no residues! It is patented and contains EU-approved ingredients.

## AQUAFORM

stands for:

- Increased growth
- Saved feed costs
- Strong antimicrobial effects
- High survival

**Table 1:** Performance parameters of juvenile shrimp fed with or without different AQUAFORM (trial period 80 days; initial weight: 0.82 g)

Parameter	Negative control	0.2% KDF	Difference (%)
Final weight (g)	9.21	10.64	+15.5
Weight gain (g)	8.39	9.82	17.0
SRG (%)	3.34±0.11	3.51±0.11	+5.1
Survival (%)	73.3±11.6	96.7±5.8	+31.8
Productivity Index	29.4	45.4	+54.4

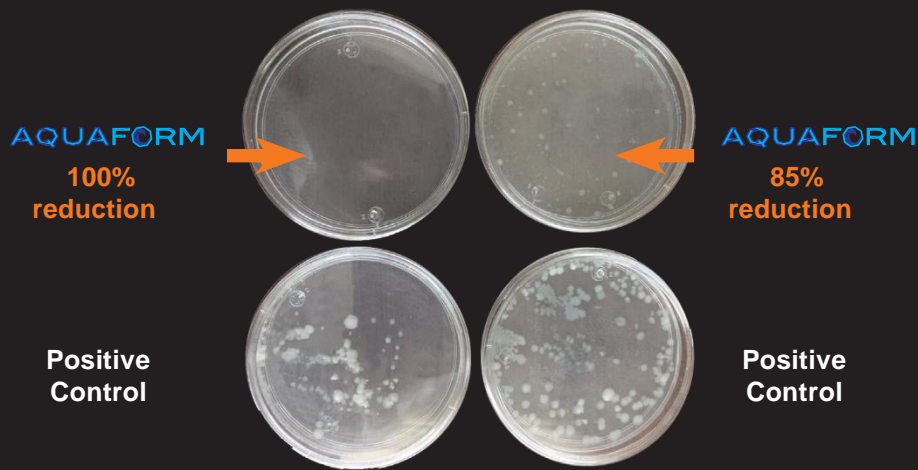

## Technical data

**Dosages:**  
3-5 kg/t of feed,  
depending on farm conditions

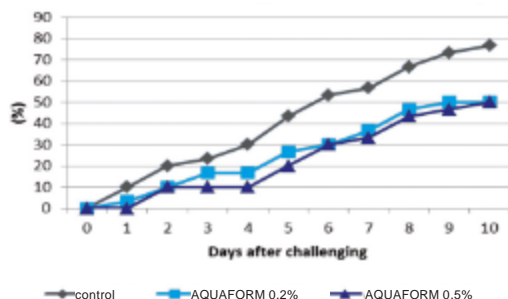

**Storage and shelf life:**

in 25 kg bags  
with a 24 months shelf life

**Figure 1:** Impact of AQUAFORM on Vibrio count in shrimp

Accumulative percent mortality

**Figure 2:**

after *V. harveyi* challenge fed with or without KDF (potassium diformate, AQUAFORM)

## Certification

ADDCON –  
EU-hygiene regulation 183 / 2005:  
α-Nr. Bitterfeld: DE ST 100033, DE ST 100024  
α-No. Porsgrunn: α NO 10050081
